Instructions: Choose the best answer for each question.

1. What is the main purpose of JButton in Java Swing?
 - A. To create a text field
 - B. To create a clickable button
 - C. To create a window
 - D. To create a layout
2. Which package contains JButton?
 - A. java.io
 - B. java.util
 - C. javax.swing
 - D. java.awt.event
3. Which code correctly creates a button?
 - A. Button button = new Button();
 - B. JButton button = new JButton("Click Me");
 - C. JButton("Click Me");
 - D. new Button = JButton("Click Me");
4. What text will appear on this button? JButton button = new JButton("Submit");
 - A. Button
 - B. JButton
 - C. Submit
 - D. Click
5. What is the purpose of ActionListener?
 - A. To create a window
 - B. To change the window size
 - C. To detect and respond to user actions
 - D. To create a panel
6. Which method is used to add an ActionListener to a button?
 - A. addButton()
 - B. addActionListener()
 - C. setAction()
 - D. actionButton()
7. What action is commonly detected by an ActionListener attached to a JButton?
 - A. Typing
 - B. Scrolling
 - C. Clicking
 - D. Resizing
8. What does button.addActionListener(e -> { System.out.println("Hello!"); }); do?
 - A. Creates a button
 - B. Prints "Hello!" when the button is clicked
 - C. Creates a window
 - D. Deletes the button
9. What does System.out.println() do?
 - A. Displays output in the console
 - B. Creates a button
 - C. Changes the GUI layout
 - D. Creates a JFrame
10. What does label.setText("Welcome!"); do?

- A. Creates a label
 - B. Deletes the label
 - C. Changes the label's displayed text
 - D. Creates a button
11. What Swing component is used to display text?
- A. JButton
 - B. JLabel
 - C. JPanel
 - D. JFrame
